Source: NWCC Large Fire Public Information (ICS-209 filings), matched onto WFIGS incident records. Type breakdown parsed from NWCC's Structure_Threat/Structure_Damaged/Structures_Destroyed2 free-text fields; small fires may not file until significant impact. "Uncategorized" is a bare NWCC number with no descriptive text — added 2026-08-01 to stop those from being silently counted as residences (NWCC's free text isn't reliable enough to assume a category when it doesn't say one).

Methodology note (effective July 19, 2026): Fires without a confirmed fuel type that do not otherwise meet large fire criteria — fewer than 300 acres, no evacuation order, no IMT assigned — are excluded from this listing, active fire counts, and acreage totals. Fires that subsequently trigger an evacuation, receive an IMT, or exceed 300 acres are included automatically. Statistics prior to July 19, 2026 reflect the previous definition (unknown fuel type defaulted to the 100-acre timber threshold).

2. LARGE FIRES LOG — YEAR TO DATE

Large Fire (NWCC definition): Any wildland fire in timber ≥100 acres or in grassland/rangeland ≥300 acres; or any fire with an Incident Management Team (IMT) assigned; or any fire that has triggered any level of evacuation. Fires with unknown or unspecified fuel type require ≥300 acres to qualify.
